

Data Structures (Into Java): Corrections

Errata as of Tue Dec 21 17:00:23 2004.

The on-line version of the *Data Structures* reference incorporates the following corrections to the paper version of the book. Thanks to John Lo (JL), Michael Clancy (MC), and Brighten Godfrey for these corrections.

1. [JL] On the bottom of page 17, the `mung` routine should be declared to return `void` and should not contain a `return` statement.
2. In Figure 8.4, page 143, the '#I' column value for the second array should be 91, not 105.
3. [MC] On the top of page 179, only the tree on the left is a possible case, since the tree on the right would already have been unbalanced before the addition of its final node.
