

# Summary of

“Data Processing Algorithm for Generating 3D building Facade Meshes From Laser Scans and Camera Images”. An article by Christian Frueh, Siddharth Jain, Avideh Zakhor

Ilya Landa

03/30/2008

# Overview

- The need for creating 3D models of urban environments
- Current methods
  - Aerial Photography
  - Vision Based Methods
  - Robot Mounted 2D/3D Lasers
  - Van Mounted Lasers Equipped With GPS

# Experiment Setup

- Vertical 2D laser
- Horizontal 2D laser
- Digital Camera

# Experiment Setup

# Problems and Complications

# Raw Triangulation

# Occlusion

# Reverse Order Scans

$$d_{crit} = \frac{\Delta s}{\sin(\Delta \theta)}$$

# Reflective or Transparent Surfaces

# Organizing Scan Points

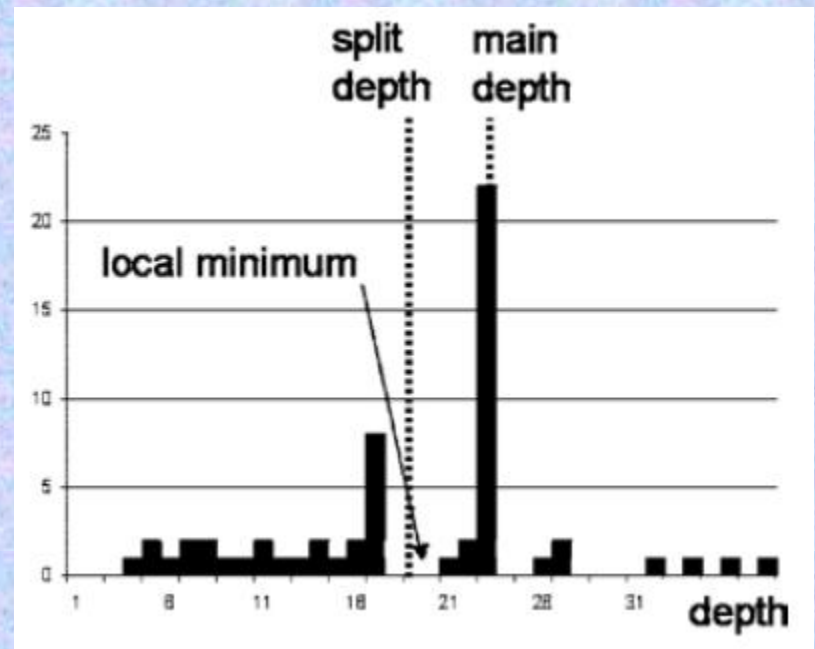

# Downtown Assumptions

- Buildings have relatively flat facades that are parallel to the road, thus perpendicular to the scans
- Ground is a horizontal plane in all scans
- Surveyed landscapes are not dominated by trees

# Depth Levels

- Main Depth – most frequent value
- Split Depth – local minimum
- Background Layer – around main depth
- Foreground Layer – trees, cars, etc.
- Ground Level

# Accumulative Histogram

# Results of the Split

Raw Points

Foreground Layer

Horizontal Laser Points Added

Background Layer + Ground Points

# Projecting Foreground Objects onto the background and ground layers

# Removing Window Holes

- Scanning a window results in a series of points with a random and large depth.
- If such points are in between points on the main depth, the hole can be eliminated.

# Point Improvement Overview

# Texture Generation

# Camera Data

# Naive Foreground Removal

# Background / Foreground Splitting Setup

# Background / Foreground Splitting

## No Obstacles

# No Obstacles Example

# Background / Foreground Splitting Small Obstacle

# Small Obstacle Example

# Background / Foreground Splitting Large Obstacle

# Large Obstacle Example

# Split Results

# Combining Split Photos

# Linear Hole Filling

# Copy-Paste

# Final Texture Atlas

# Quality Comparison

# Raw vs. Improved

## Visual Comparison of 73 City Block Fronts

Significantly Better	35	48%
Better	17	23%
Same	15	21%
Worse	5	7%
Significantly Worse	1	1%
Total	73	100%
